(57)Abstract:

PURPOSE: To confirm a progressing state of one operation and a progressing state of an other operation by switching a full screen display on a display panel to a separate display when the other operation is executed during progressing of one operation by overlapping timewise.

CONSTITUTION: Information relating to the operation is displayed on a display panel during data input operation to a picture memory 5 and when other operation request whose display preferential order is equal is made in the interval, division display for preparation to display both the operations on a display panel is started. Then a display memory 1 is used as a work area and the information relating to both the operation is generated and displayed on the display panel in dividing by transferring the required part of the information relating to a data input operation to the picture memory 5 from the display memory 2 and the required part of the information relating to a data output operation from the picture memory 5 to the display memory 1. Thus, when other operation is started during one operation, both the operations are displayed in dividing on the display panel by the processing of a panel control section 14.
